How does 32-bit or 64-bit hardware affect software?

32-bit programs can run on a 64-bit system, but 64-bit programs will not run on a 32-bit system. This is because 64-bit applications include 64-bit instructions that will not be recognized by a 32-bit processor. If we want to run a 64-bit program, our operating system must be 64-bit.
