## Eigen Values and Characteristics roots?

To find Eigen values use, $|A-\lambda| \mid=0$
For characteristics roots, ( $A-\lambda \mid$ ) $=0$
When represents characteristics roots in matrix they called Eigen vectors.

If $A$ is an $n \times n$ matrix, then the sum of the $n$ eigenvalues of $A$ is the trace of $A$ and the product of the n eigenvalues is the determinant of A .

Eigenvalues of a Matrix and its Transpose are same.
