

1. What is a key characteristic of a Scrum team?

- a) Hierarchical structure
- b) Fixed roles and responsibilities
- c) Flexible adaptability
- d) Detailed documentation

Answer: c) Flexible adaptability

Explanation: Scrum teams are known for their flexibility and adaptability, allowing them to respond to changes quickly and effectively.

2. Which methodology emphasizes continuous improvement through small, frequent releases?

- a) Waterfall
- b) Agile
- c) Lean
- d) Six Sigma

Answer: b) Agile

Explanation: Agile methodologies focus on iterative development and continuous improvement through small, frequent releases.

3. In Agile, what is the purpose of a retrospective?

- a) To assign blame for project issues

- b) To celebrate project milestones
- c) To identify areas for improvement
- d) To finalize project documentation

Answer: c) To identify areas for improvement

Explanation: Retrospectives in Agile projects provide teams with an opportunity to reflect on their processes and identify areas for improvement.

4. What is a core principle of Extreme Programming (XP)?

- a) Detailed upfront planning
- b) Emphasis on individual heroics
- c) Continuous feedback and testing
- d) Fixed scope and timeline

Answer: c) Continuous feedback and testing

Explanation: Extreme Programming emphasizes continuous feedback and testing throughout the development process to ensure high-quality software.

5. Which Agile artifact is used to capture and prioritize requirements?

- a) Product backlog
- b) Gantt chart
- c) Project charter
- d) Work breakdown structure

Answer: a) Product backlog

Explanation: The product backlog in Agile projects is used to capture and prioritize requirements, typically in the form of user stories.

6. What is the primary responsibility of a Scrum Master?

- a) Managing the project budget
- b) Providing technical guidance
- c) Facilitating the Scrum process
- d) Writing code

Answer: c) Facilitating the Scrum process

Explanation: The Scrum Master's primary responsibility is to facilitate the Scrum process and ensure that the team adheres to Agile principles and practices.

7. Which Agile practice involves breaking work into small, manageable tasks?

- a) Sprint planning
- b) User story mapping
- c) Task decomposition
- d) Velocity tracking

Answer: c) Task decomposition

Explanation: Task decomposition involves breaking down work into small, manageable tasks to be completed within a sprint or iteration.

8. What is the purpose of release planning in Agile projects?

- a) To assign tasks to team members
- b) To prioritize user stories
- c) To create a timeline for product releases
- d) To conduct user acceptance testing

Answer: c) To create a timeline for product releases

Explanation: Release planning in Agile projects involves creating a timeline for product releases based on the prioritized product backlog.

9. Which Agile principle emphasizes the importance of sustainable development?

- a) Customer collaboration over contract negotiation
- b) Responding to change over following a plan
- c) Delivering working software frequently
- d) Agile processes promote sustainable development

Answer: d) Agile processes promote sustainable development

Explanation: This is a direct statement from the Agile Manifesto, emphasizing the importance of sustainable development practices.

10. What is the primary goal of a daily stand-up meeting in Agile?

- a) Detailed status reporting
- b) Problem-solving

- c) Team coordination
- d) Time tracking

Answer: c) Team coordination

Explanation: The primary goal of a daily stand-up meeting in Agile is to facilitate team coordination and ensure that everyone is aligned on the current status and upcoming tasks.

11. Which Agile methodology places a strong emphasis on customer collaboration?

- a) Lean
- b) Kanban
- c) Scrum
- d) Crystal

Answer: c) Scrum

Explanation: Scrum places a strong emphasis on customer collaboration, with regular feedback loops and involvement throughout the development process.

12. In Agile projects, who is responsible for prioritizing items in the product backlog?

- a) Project manager
- b) Product owner
- c) Scrum Master
- d) Development team

Answer: b) Product owner

Explanation: The product owner is responsible for prioritizing items in the product backlog based on business value and stakeholder needs.

13. Which Agile practice involves breaking down large features into smaller, more manageable user stories?

- a) Incremental development
- b) Story splitting
- c) Acceptance criteria
- d) Timeboxing

Answer: b) Story splitting

Explanation: Story splitting involves breaking down large features into smaller, more manageable user stories that can be completed within a single iteration.

14. What is the purpose of a burndown chart in Agile projects?

- a) To track team velocity
- b) To monitor project budget
- c) To visualize progress over time
- d) To prioritize backlog items

Answer: c) To visualize progress over time

Explanation: A burndown chart in Agile projects is used to visualize the progress of work completed versus the time remaining in the iteration or sprint.

15. Which Agile practice involves limiting the amount of work in progress to improve flow?

- a) Daily stand-up meetings
- b) Sprint planning
- c) Continuous integration
- d) Kanban

Answer: d) Kanban

Explanation: Kanban involves limiting the amount of work in progress (WIP) to improve flow and optimize the efficiency of the development process.

16. What is the purpose of user stories in Agile projects?

- a) To define technical specifications
- b) To estimate project duration
- c) To capture user requirements
- d) To document testing procedures

Answer: c) To capture user requirements

Explanation: User stories in Agile projects are used to capture user requirements from a user's perspective, typically in a simple, non-technical format.

17. Which Agile practice involves self-organizing teams and cross-functional collaboration?

- a) Pair programming
- b) Test-driven development

- c) Continuous deployment
- d) Agile manifesto

Answer: a) Pair programming

Explanation: Pair programming is an Agile practice that involves self-organizing teams and cross-functional collaboration, where two programmers work together at one workstation.

18. What is the purpose of a sprint review in Scrum?

- a) To demo completed work to stakeholders
- b) To plan the next sprint
- c) To review and update the product backlog
- d) To address technical debt

Answer: a) To demo completed work to stakeholders

Explanation: The purpose of a sprint review in Scrum is to demonstrate completed work to stakeholders and gather feedback for future iterations.

19. Which Agile principle emphasizes the importance of face-to-face communication?

- a) Working software over comprehensive documentation
- b) Customer collaboration over contract negotiation
- c) Responding to change over following a plan
- d) Individuals and interactions over processes and tools

Answer: d) Individuals and interactions over processes and tools

Explanation: This principle highlights the value of face-to-face communication and collaboration within Agile teams.

20. What is the primary goal of risk management in Agile projects?

- a) To eliminate all project risks
- b) To identify and mitigate potential issues
- c) To create detailed risk documentation
- d) To assign responsibility for risks

Answer: b) To identify and mitigate potential issues

Explanation: The primary goal of risk management in Agile projects is to identify and mitigate potential issues early in the development process to minimize their impact on project success.
