

Consider the following relations:

Student (ssn, name, address, major)

Course (code, title)

Registered (ssn, code)

Use relational algebra to answer the following :

- a. List the codes of courses in which at least one student is registered (registered courses).
- b. List the title of registered courses.
- c. List the codes of courses for which no student is registered.
- d. The titles of courses for which no student is registered.
- e. Name of students and the titles of courses they registered to.
- f. SSNs of students who are registered for both database systems and analysis of algorithms.
- g. SSNs of students who are registered for both database systems and analysis of algorithms.
- h. The name of students who are registered for both database systems and analysis of algorithms.
- i. List of courses in which all students are registered.
- j. List of courses in which all 'ECMP' major students are registered.

- a. List the codes of courses in which at least one student is registered (registered courses).

$\pi_{code}(Registered)$

- b. List the title of registered courses. $\pi_{title}(Course \bowtie Registered)$

- c. List the codes of courses for which no student is registered.

Consider the following relations:

$$\pi_{code}(Course) - \pi_{code}(Registered)$$

d. The titles of courses for which no student is registered.

$$((Course - (Course \bowtie Registered)))n_{title}$$

e. Name of students and the titles of courses they registered to.

$$(\text{Student} \bowtie \text{Registered} \bowtie \text{Course}) \pi_{name, title}$$

f. SSNs of students who are registered for both database systems and analysis of algorithms.

g. SSNs of students who are registered for either database systems or analysis of algorithms.

h. The name of students who are registered for both database systems and analysis of algorithms.

1. $\pi_{\text{ssn}}(\sigma_{\text{title} = \text{'Database Systems'}}(\text{Student} \bowtie \text{Registered} \bowtie (\text{Course} \bowtie \sigma_{\text{title} = \text{'Analysis of Algorithms'}}(\text{Course})))$

i. List of courses in which all students are registered.

$$\frac{\pi_{code,ssn}(Registered)/\pi_{ssn}(Student)}{\pi_{code,ssn}(Registered)/\pi_{ssn}(Student)}$$

j. List of courses in which all 'ECMP' major students are registered.

$$\frac{ssn(Registered)}{\pi ssn(\sigma_{major='ECMP'} Student)} \pi code,$$

Consider the following relations:

Explanation:

- $\bowtie \dots \pi \dots$: Projection operation (selecting specific columns)
- $\bowtie \dots \sigma \dots$: Selection operation (filtering rows based on a condition)
- $\bowtie \bowtie$: Natural join operation (joining tables based on common columns)
- $\bowtie / \bowtie A/B$: Division operation (returning elements from A that match every element in B)

These expressions represent the operations needed to answer each question using relational algebra.
