Table of Contents

1. Selector

The selector is used to target HTML elements to which the styles will be applied.

```
selector {
  /* Declaration Block */
}
```

Example

```
body {
  /* Styles for the body element */
}
```

2. Declaration Block

The declaration block is enclosed in curly braces {} and contains one or more property-value

pairs.

```css
selector {
    property: value;
}
```

Example

```css
body {
    background-color: #f0f0f0;
    color: #333;
}
```

3. Property-Value Pairs

Each property-value pair defines a specific aspect of the element's style.

```css
selector {
    property1: value1;
    property2: value2;
    /* Add more properties as needed */
}
```

```
        }
```

Example

```
h1 {
    font-size: 24px;
    color: #007bff;
}
```

4. Comments

Comments in CSS are written using /* */. They are ignored by browsers and can be used for documentation.

```
/* This is a comment */
selector {
    /* Comment for a property */
    property: value;
}
```
