

## Difference between static and non static methods in Java

Feature	Static Method	Non-Static Method
Access	Accessed using the class name directly or through an object reference	Accessed only through an object reference
Memory	No memory is allocated for "this" keyword	Memory is allocated for "this" keyword
Invocation	Invoked using the class name directly or through an object reference	Invoked using an object reference
Overriding	Cannot be overridden	Can be overridden
Utility	Used for utility methods that are not specific to individual objects	Used for behavior specific to individual objects
Access to Static Members	Can access static members directly	Can access static members directly or through the class name
Access to Non-Static Members	Cannot access non-static members directly	Can access non-static members directly or through "this" keyword
