

Typography:

1. What is Typography?

- Typography is the art of arranging text to make it look good and easy to read, whether on paper or screens.

2. Typeface and Font:

- A typeface is like the style of text, such as Times New Roman or Arial.
- A font is a specific size of a typeface, like Times Roman 16 point or Arial 12 point.

3. On Screens:

- In digital design, fonts are used to organize information, show importance, guide reading, and set a mood.
- There are many font options available, and operating systems provide default fonts.

4. User Control:

- Users can often change fonts on their screens, but many stick to defaults.
- Using too many different fonts or styles can make the screen confusing.

5. Font Types and Families:

- Simple, common fonts are best for clarity on screens.
- Font families have styles that work well together, creating a unified design.

6. Font Size:

- Font sizes are measured in points (1 point = 1/12 inch).
- Sizes should be big enough to be easily readable on standard screens.

7. Font Styles and Weight:

- Italics can emphasize text, but use sparingly as it might be hard to read.
- Bold is for drawing attention, but be cautious not to make things too visually heavy.

- Underlining is often reserved for web links to avoid confusion.

8. Font Case:

- Choose between uppercase (ALL CAPITAL) and mixed case (some capitalization, mostly lowercase).
- Mixed case is often more natural and easier to read.
