Q. What is 2-step verification using mobile OTP ?

Two-step verification with mobile OTP is a security feature that requires both your password and a temporary, one-time code sent to your mobile phone via SMS for logging into your Gmail account.

Enabling two-step verification (also known as two-factor authentication):

1. Go to your Google Account:
    - Visit https://myaccount.google.com/.
2. Sign In:
    - If you're not already signed in, sign in to your Google Account.
3. Security Settings:
    - In the left-hand menu, select "Security".
4. 2-Step Verification:
    - Scroll down to the "Signing in to Google" section.
    - Click on "2-Step Verification".
5. Start the Setup Process:
    - Click "Get started".
6. Verify Your Password:
    - You'll be prompted to enter your Google Account password.
7. Phone Verification:
    - Enter your phone number. This is where you'll receive your verification codes.
    - Choose whether you'd like to receive codes via text message or phone call.
    - Click "Next".
8. Verify the Code:

- Enter the code you receive on your phone and click “Next”.

9. Trust the Computer:
    - You can choose to trust the computer you’re using, so you won’t be prompted for a code on that specific device in the future (optional but recommended for personal devices).
10. Turn On 2-Step Verification:
    - Click “Turn On”.
11. Backup Codes (Optional):
    - Google will give you the option to download backup codes. These are useful if you can’t access your phone.
    - Keep these codes safe and don’t share them with anyone.
12. Confirmation:
    - You’ll receive a confirmation that 2-Step Verification is turned on.
