

The design process :

1. Define Purpose:
 - Figure out what the icon is for and where it will be used.
 - Brainstorm ideas with the team, thinking about real-world connections.
 - Keep it simple with basic concepts for a clear message.
2. Collect, Evaluate, and Sketch:
 - Start with paper sketches before moving to the computer.
 - Everyone on the team should contribute their ideas through sketches.
 - Don't worry about details or pixel perfection at this stage.
3. Draw in Black and White:
 - Many icons will be displayed in monochrome (single color).
 - Consider color as an enhancement, not a necessity.
4. Test for Expectation, Recognition, and Learning:
 - Icons represent objects and actions; testing is crucial.
 - Regularly test and refine the icons for user expectations and recognition.
 - Measure both recognition and learning during testing.
5. Test for Legibility:
 - Ensure icons are clear and readable, especially on different screen backgrounds.
 - Check against various background colors; white or gray might pose challenges.
 - Redraw in black and white if color creates issues on certain screens.
6. Register Icons in the Systems Registry:
 - Keep a record of all system icons in a registry.
 - Provide detailed descriptions for each icon for clarity.
