Why You Are Getting the “Too Many Redirects” Error?

The ERR_TOO_MANY_REDIRECTS issue occurs when your website enters a redirection loop. Based on your DNS records and Cloudflare settings, here are the possible reasons:

1. HTTPS Redirect Loop (Cloudflare vs. GoDaddy)

- Issue: Cloudflare forces HTTPS while your GoDaddy server may also be forcing HTTPS.
- Fix:
    1. Login to Cloudflare Dashboard → Go to SSL/TLS Settings.
    2. Set SSL mode to “Full” (Not “Flexible”).
    3. If it’s already “Full (Strict)”, try switching to “Full”.
    4. Disable Automatic HTTPS Rewrites in Cloudflare (temporarily).

2. Misconfigured WordPress URL

- Issue: WordPress might be set to HTTP while Cloudflare enforces HTTPS.
- Fix:
    1. Login to phpMyAdmin (via cPanel or database).
    2. Locate the database of your WordPress site.
    3. Find the wp_options table.
    4. Edit these values:
        - `siteurl` → https://damainname.in
        - `home` → https://domainname.in
    5. Save changes and clear Cloudflare cache.

3. Conflicting Redirects in .htaccess

- Issue: There might be multiple redirect rules inside your `.htaccess` file.

- Fix:
    1. Go to your GoDaddy hosting file manager.
    2. Open the `.htaccess` file (inside `public_html`).
    3. Remove any duplicate or conflicting rules related to: `RewriteEngine On RewriteCond %{HTTPS} off RewriteRule ^(.*)$ https://%{HTTP_HOST}/$1 [R=301,L]`
    4. Save and restart the server.

4. Incorrect DNS CNAME for “www”

- Issue: Your www.domainname.in is a CNAME pointing to domainname.in, which already has an `A` record.
- Fix: Convert www.domainname.in from a `CNAME` to an `A` record with: `www 1 IN A xxx.xxx.xxx.xxx`

5. Clear Cloudflare Cache

- Go to: Cloudflare Dashboard → Cache → Purge Everything.

Final Steps to Fix

 Step 1: Fix SSL settings in Cloudflare (`Full` mode, disable automatic HTTPS rewrite).
 Step 2: Update WordPress URL in phpMyAdmin (`wp_options`).
 Step 3: Remove unnecessary `.htaccess` redirects.
 Step 4: Change `www.domainname.in` from `CNAME` to `A` record.

 Step 5: Purge Cloudflare Cache and restart the server.

After making these changes, test the site again.
