How to create a subdomain in Cloudflare

Published on: 2022/05/25

Step 01 : Login to cloudflare.com

Step 02: Select website

Step 03: Go to DNS settings

Step 04: Click on Add record

Search DNS Records

| 🔍 | | Search | 🗐 Advanced | ⊕ Add record |

Step 05:

Type	Name (required)	Target (required)	Proxy status	TTL
CNAM ▼	subdomainName	@	🔘 ☁→ Proxied	Auto
	Use @ for root			

Cancel   Save

Do following settings:

```
Type : CNAME
Name : Subdomain name (Like admission in
admission.easyexamnotes.com)
Target : @ or Domain name
Proxy status : Enabled
TTL : Auto
```

Above settings are sufficient.

But, if you still get error like, subdomain not point to IP.

Than client certificates may be mission.

Than follow the steps mentioned on this page to generate client certificares.
