

1. Which of the following factors are directly influenced by productivity?

- a) Standard of living
- b) Happiness
- c) Quality of goods
- d) All of the above

Answer: d) All of the above

Explanation: Productivity impacts various aspects of life including standard of living, happiness, and the quality of goods and services produced.

2. What distinguishes operations management from project management?

- a) Operations management deals with ongoing, repetitive tasks while project management focuses on temporary, unique endeavors.
- b) Operations management only applies to manufacturing industries, whereas project management applies to all sectors.
- c) Operations management is primarily concerned with strategic planning, while project management is focused on tactical execution.
- d) There is no difference between operations management and project management.

Answer: a) Operations management deals with ongoing, repetitive tasks while project management focuses on temporary, unique endeavors.

Explanation: Operations management involves managing day-to-day activities in a business, whereas project management involves overseeing specific, temporary projects.

3. Which of the following is a key principle of lean manufacturing?

- a) Just-in-Time (JIT)
- b) Total Quality Management (TQM)
- c) Quality Function Deployment (QFD)
- d) Six Sigma

Answer: a) Just-in-Time (JIT)

Explanation: Lean manufacturing focuses on minimizing waste and maximizing efficiency, with JIT being a central concept to produce items only as needed.

4. In operations management, what does TPM stand for?

- a) Total Process Management
- b) Total Productive Maintenance
- c) Total Quality Management
- d) Time Process Measurement

Answer: b) Total Productive Maintenance

Explanation: TPM aims to maximize the effectiveness of equipment and machinery to enhance overall productivity in operations management.

5. Which method emphasizes continuous improvement and customer satisfaction?

- a) Predetermined Motion and Time Method
- b) Total Quality Management

- c) Standard Time Measurement
- d) Product and Process Specification

Answer: b) Total Quality Management

Explanation: TQM focuses on improving processes continuously to enhance product quality and meet customer needs and expectations.

6. What is the primary goal of Six Sigma quality methodology?

- a) Minimize waste
- b) Maximize productivity
- c) Reduce defects
- d) Enhance employee satisfaction

Answer: c) Reduce defects

Explanation: Six Sigma aims to reduce defects and errors in processes to improve quality and efficiency.

7. Which concept focuses on translating customer needs into specific product features and requirements?

- a) Total Quality Management
- b) Quality Function Deployment
- c) Just-in-Time
- d) Total Productive Maintenance

Answer: b) Quality Function Deployment

Explanation: QFD is a method used to ensure that customer needs are met through product design and development processes.

8. What does the term “standard time” refer to in operations management?

- a) The time required to complete a task at the highest level of efficiency
- b) The average time taken by workers to complete a task
- c) The time allocated for breaks and rest periods
- d) The time specified in project schedules

Answer: a) The time required to complete a task at the highest level of efficiency

Explanation: Standard time represents the time it should take a skilled worker to perform a specific task under normal working conditions.

9. What is the purpose of predetermined motion and time method (PMTM)?

- a) To measure the time taken to complete a task
- b) To set standard times for various tasks
- c) To identify and eliminate unnecessary motions
- d) To allocate allowances for breaks and rest periods

Answer: b) To set standard times for various tasks

Explanation: PMTM is used to establish standard times for performing specific tasks by analyzing predetermined motions and times required.

10. Which term refers to the cost associated with ensuring that a product or service meets quality standards?

- a) Cost of production
- b) Cost of quality
- c) Cost of materials
- d) Cost of labor

Answer: b) Cost of quality

Explanation: The cost of quality includes expenses incurred to prevent, detect, and correct defects in products or services to meet quality standards.
