

Append The Number 9 To The List

Python

```
my_list = [1, 2, 3, 4, 5]
```

To append the number 9 to the list `my_list`, you can use the `append()` method.

Here's how you can do it:

Python

```
my_list.append(9)
```

After this operation, `my_list` will be `[1, 2, 3, 4, 5, 9]` with 9 added as the last element.

Remove The Element 4 From The List

To remove the element 4 from the list `my_list`, you can use the `remove()` method.

Here's how you can do it:

Python

```
my_list.remove(4)
```

After this operation, `my_list` will be `[1, 2, 3, 5, 6]` with 4 removed from the list.

Replace The Second Element With 11.

To replace the second element (index 1) with the value 11 in the list `my_list`, you can simply assign the new value to that index.

Here's how you can do it:

Python 

```
my_list[1] = 11
```

After this operation, `my_list` will be `[1, 11, 3, 5, 6]` with the second element replaced by 11.
