# Append The Number 9 To The List

```
my_list = [1, 2, 3, 4, 5]
```

To append the number 9 to the list my\_list, you can use the append() method.

Here's how you can do it:

my\_list.append(9)

After this operation, my list will be [1, 2, 3, 4, 5, 9] with 9 added as the last element.

### Remove The Element 4 From The List

To remove the element 4 from the list my list, you can use the remove() method.

Here's how you can do it:

### my\_list.remove(4)

After this operation, my\_list will be [1, 2, 3, 5, 6] with 4 removed from the list.

## Replace The Second Element With 11.

To replace the second element (index 1) with the value 11 in the list my\_list, you can simply assign the new value to that index.

Here's how you can do it:

Python

 $my_list[1] = 11$ 

After this operation, my\_list will be [1, 11, 3, 5, 6] with the second element replaced by 11.
