Selection controls are elements in a user interface that allow users to choose from different options or make selections. Here are some common types of selection controls:

1. Radio Buttons:
    - These are circular controls used to choose one option from a list.
    - They resemble radio station buttons, hence the name.
    - In Microsoft Windows, they might be called option buttons.
2. Check Boxes:
    - These are square controls that allow users to select multiple options.
    - They can be called check boxes, toggle buttons, switches, or other names.
    - Used for two-state, non-exclusive settings.
3. List Boxes:
    - A rectangular box displaying a list of values or attributes.
    - Users can make single or multiple selections from the list.
4. Drop-down/Pop-up List Boxes:
    - A single field with a button that, when clicked, reveals a list of options.
    - Users can choose from the hidden list by clicking.
5. Palettes:
    - Similar to radio buttons, presenting mutually exclusive alternatives.
    - Choices are visually descriptive (e.g., colors or patterns) without additional text.
    - Can be presented as a standard control, in a toolbar, or within a pop-up menu.
