What are the different models used in object oriented languages ?OR
Write short note on dynamic modeling and functional modeling.

There are three types of models in object oriented languages are :

1. Object Model:
    - Definition: The object model deals with identifying classes in a system, their relationships, attributes, and operations.
    - Representation: Shown through class diagrams, which visually depict the static structure of the system.
2. Dynamic Model:
    - Definition: The dynamic model focuses on the behavior of objects over time, illustrating how objects change states and interact.
    - Representation: Captures the functional behavior through the flow of control and events among objects.
3. Functional Model:
    - Definition: The functional model is like a map that shows what the system does, not how it’s done.
    - Representation: Presented as a Data Flow Diagram (DFD) which includes processes, data flows, actors, and data stores.
    - Explanation: Think of it as a flowchart illustrating the paths of information through a system, showing how data moves between processes, actors, and storage.
