

What are the physical reactions to poor design ?

Abandonment of the system:

- Users reject the system and turn to other sources of information.
- Common among managers and professionals in business systems or any user on the web.

Partial use of the system:

- Users only use the easiest or most beneficial features of the system.
- Historically, many computer systems have unused capabilities.

Indirect use of the system:

- Users place an intermediary between themselves and the computer.
- Typically done by those with high status and discretion, like managers.

Modification of the task:

- Users change the task to fit the system's capabilities.
- Common in situations where tools are inflexible, and the problem is unstructured.

Compensatory activity:

- Users perform extra actions to compensate for system shortcomings.
- For instance, manually reformatting information to match the computer's requirements.

Misuse of the system:

What are the physical reactions to poor design ?

- Users bend the rules to bypass operational difficulties.
- Requires good knowledge of the system and may impact its integrity.

Direct programming:

- Users reprogram the system to meet their specific needs.
- Often done by more sophisticated users.
