

## uses of color

### 1. Formatting a Screen:

#### a. Relating or tying elements into groupings: -

Purpose: Color helps visually connect related items.

Example: Use the same color for buttons and their corresponding labels.

#### b. Breaking apart separate groupings of information: -

Purpose: Color creates visual distinctions between different sections.

Example: Use different background colors for distinct content areas.

#### c. Associating widely separated information on the screen: -

Purpose: Color links related information that may be physically distant.

Example: Use a consistent color for headers or labels across the screen.

#### d. Highlighting important information:

Purpose: Color draws attention to crucial details. -

Example: Use a contrasting color for key information or error messages.

## 2. Visual Code for Identification:

### a. Identifying screen components: –

Purpose: Color helps recognize different parts of the interface.

Example: Buttons in one color, input fields in another.

### b. Representing the logical structure: –

Purpose: Color signifies the flow or hierarchy of information.

Example: Use different colors for main steps and sub-steps in a process.

### c. Highlighting sources of information: –

Purpose: Color indicates the origin or category of data.

Example: Use distinct colors for user-generated content and system-generated content.

### d. Showing the status of information: –

Purpose: Color communicates the state of data (e.g., active, completed, or pending).

Example: Use red for errors, green for success messages.

## 3. Other Uses:

a. Realistically portraying natural objects: –

Purpose: Color contributes to a lifelike representation of elements.

Example: Use natural colors for images of plants, animals, etc.

b. Increasing screen appeal: –

Purpose: Color enhances the overall visual experience.

Example: Use a pleasing color scheme for a more attractive interface.
