

**Visual Transformation:** Graphics have transformed computer screens from simple, text-based displays to more visually dynamic and three-dimensional interfaces.

**Enhanced User Experience:** Unlike older text-based screens, graphics provide a more immersive experience. Controls seem to have depth, and they respond by moving when activated, giving a sense of interaction.

**Dynamic Information Display:** Graphics allow information to appear and disappear as needed, providing a more dynamic and flexible way to present content.

**Iconic Representation:** Text can be replaced by graphical icons representing objects or actions, making it easier for users to understand and interact with the interface.

**Diverse Selection Fields:** Graphic interfaces incorporate various selection fields like radio buttons, check boxes, list boxes, and palettes alongside traditional text entry fields, offering diverse ways for users to input information.

**Point-and-Click Navigation:** Objects and actions are selected using pointing mechanisms, simplifying user interactions and making the interface more intuitive.

**Improved Responsiveness:** Increased computer power allows for quick, dynamic, and meaningful reactions to user actions, enhancing the overall responsiveness of the interface.

**WIMP Interface:** This graphical interface is commonly known as WIMP, which stands for Windows, Icons, Menus, and Pointers, emphasizing the key components that make graphic interfaces user-friendly.

**Effectiveness of Presentation:** Graphic presentations are considered more effective than

other methods, as they reduce the need for perceptual and mental recoding of information, easing the cognitive load on users.

**Memory Load Reduction:** Proper use of graphics can reduce the requirement for memorization, as visual elements are often easier to remember than textual information.

**Aesthetic Appeal:** Graphics add appeal and charm to interfaces, allowing for greater customization to create a unique corporate or organizational style.
