Screen design refers to the creation of visually appealing and user-friendly graphical interfaces, commonly seen in applications and websites.

## A well-designed screen :

User-Centric Approach: The design should take into account the abilities, preferences, and tasks of the users. It should be intuitive, making it easy for users to understand and navigate.

Hardware Constraints: The design needs to work within the limitations of the device's hardware. This includes factors like screen size, resolution, and processing power.

Software Integration: It should effectively use the features provided by the software controlling it. This ensures seamless interaction and functionality within the given application or system.

Business Objectives: The design should align with the overall goals of the system. Whether it's increasing user engagement, driving sales, or conveying information, the screen should contribute to achieving these business objectives.
